

## BLS Certification Continues to Improve Through Automated Teaching Methods

Written by Australian Business

---

( [PRLEAP.COM](http://PRLEAP.COM) ) Basic Life Support (BLS) certification is now available online faster and easier than ever before through an automated online teaching system. BLS certification includes a series of life saving techniques and interventions that allow a person to save a life in the event of a cardiac or respiratory arrest. United Medical Education is an online certifying institution that has created a Basic Life Support (BLS) certification course that can be accessed by students at any time, day or night.

The BLS course incorporates life saving techniques according to the American Heart Association (AHA) standards. In the past students had to attend a live classroom to gain their instruction at inconvenient times. This would often take people away from work or family activities. Now BLS certification has been simplified by [ACLS-PALS-BLS.com](http://ACLS-PALS-BLS.com) by placing these same life supporting techniques into an automated teaching, testing, and certificate delivery system.

United Medical Education's support staff was clear in stating that their main goal was to bring convenient learning opportunities to both healthcare professionals and lay people across the world. They stressed the importance of building a network of community citizens trained in Basic Life Support to keep neighborhoods prepared in the event of an emergency. "Having a first responder take action in the event of a heart attack immediately upon collapse is critical." Said United Medical Education's support staff.

BLS certification as well as ACLS certification and PALS certification can be found at [www.acls-pals-bls.com](http://www.acls-pals-bls.com)

. ACLS online includes the same techniques as the BLS online course plus more advanced methods for healthcare providers. All of the courses found at United Medical Education are automated for faster learning and quicker results. "Student's like immediate rewards so we give them an instant digital provider card after successful test completion. The automated system grades their exam all on its own." said United Medical Education's PR advisor.

[ACLS, PALS, BLS](http://ACLS, PALS, BLS) , and CPR have become quite common in many industries across the United States. Now that these certifications are necessary for so many professions the industry has had more reason to streamline instruction and certification. United Medical Education is one company that is looking ahead into the healthcare needs of the future and finding solutions to new problems using the digital world.
