

FREMONT, Calif., Jan. 13, 2014 /PRNewswire/ -- Exar Corporation (NYSE: [EXAR](#)), a leading supplier of high performance analog mixed-signal components and data management solutions, today introduced the XRP9710 and XRP9711 multi-output, synchronous step-down, programmable power modules that offer the industry's highest power density and lowest profile at 2.75mm with 5V-22V inputs. Both devices provide two fully integrated regulators with MOSFETs, inductors, and internal input and output capacitors in a compact 12x12x2.75mm package that support loads up to 6Amps each. The revolutionary XRP9711 also offers two controller outputs that are each capable of driving loads up to 30Amps, making it the industry's first module to offer two fully integrated channels and two controller outputs. The XRP9710 and XRP9711 are complete system power solutions that enable telemetry, reconfiguration and fast time to market in a small footprint without sacrificing performance.

The XRP9710 and XRP9711 join Exar's Power^{XR} programmable power management family utilizing award winning digital power technology and design tools. These new power modules offer full control via a SMBus compliant I²C interface allowing for advanced local- and remote-reconfiguration, full performance monitoring and reporting, as well as fault handling. The output voltages can be programmed from 0.6V up to 5.5V without requiring any external components. The XRP9710 and XRP9711 come with the newly released PowerArchitect

TM

5.1 design tool which enables customers to leverage the full capabilities of Power^{XR}

technology.

"Exar's modules have nearly halved the size of the existing 6A modules on the market converting from 12V," said James Loughheed, Exar's vice president, power management products. "With a height of 2.75mm, system engineers now have the option of mounting these modules on the back side of boards, including telecommunication line cards and PCIe cards, or in other space constrained designs. The XRP9711 also combines a high density dual power module with a programmable dual controller capable of outputs up to 30Amps in systems requiring more voltage rails and higher currents like those found in today's FPGAs and SOCs."

About Power^{XR} Technology Exar's Programmable Power Management family is marketed under the Power^{XR} brand. The Power^{XR} family of products

Exar Enters Power Module Market With Breakthrough Devices

Written by Australian Business

combines programmable power conversion control and monitoring technology with high performance analog circuitry in the industry's leading portfolio of programmable power management system solutions. Power

XR

enables system architects to create innovative products with advanced, intelligent, switching power supplies that significantly reduce wasted power and improve overall time to market compared to legacy analog power-supply regulators.

Exar's PowerArchitect™ development tools enable designers to intelligently configure the power supply's voltage setting and current thresholds, fault monitoring and response, soft start and active shutdown timing, channel sequencing, phase shift management and loop response amongst other features. Dynamic control and full system monitoring enable system architects and power designers alike to develop custom, proprietary system power designs that add value to their end applications.

Product Availability and Pricing The XRP9710 and XRP9711 are available now in a RoHS compliant, green/halogen free space-saving 12x12x2.75mm package and are priced from \$17.00 and \$19.50 respectively in 1000 piece quantities.

About Exar Exar Corporation designs, develops and markets high performance, analog mixed-signal integrated circuits and advanced sub-system solutions for the Networking & Storage, Industrial & Embedded Systems, and Communications Infrastructure markets. Exar's product portfolio includes power management and connectivity components, communications products, high performance analog mixed-signal products and network security and storage optimization solutions. Exar has locations worldwide providing real-time customer support. For
