

SAN FRANCISCO, Sept. 26, 2013 /PRNewswire/ -- [Maxthon](#), a global software company that develops state-of-the-art web browsers, today released an updated version of its iOS browser, featuring speed and performance enhancements, "shake and send" sharing capabilities and localized content in 15 languages.

"Web browsing on iOS is the 'poorer relation' to an otherwise strong iOS feature set," said Jeff Chen, CEO of Maxthon. "Maxthon's new iOS browser fills those holes and then some. It's a faster, more convenient and user-friendly way to experience the web on your iPhone or iPad."

Maxthon's new iOS browser also features:

- **Superior Social Integration:** With just the click of a button, easily share content to social channels anywhere and anytime from within the browser.
- **Optimized Sharing, "Shake and Send":** Push content to the cloud and access multiple sharing options, such as 'shake and send' that enables users to easily share content by simply shaking their device.
- **Localized Content:** Local news, content and services available in 15 languages will give users easy-to-access and relevant information on-the-go.
- **Optimized One-Handed Use:** Elegant features, such as the "Push Away Menu," allow users to easily view content and navigate the web seamlessly with one hand.

"Every day the focus of web browsing and content consumption shifts away from desktop computers and more towards mobile," said Karl Mattson, VP of Maxthon's International Division. "Web browsers need to change to become more optimized for mobile. Maxthon's updated iOS browser is a reflection of our larger vision to shift with that migration and continue our history of making the web easier, faster and optimized for whatever device our customers use."

Maxthon Brings Enhanced Performance and Superior User Experience to iPhone and iPad Web Browsing
