

VENICE, FL, April 30, 2014 **/24-7PressRelease/** -- Accurate Information Systems, a Venice Florida investigative screening, due diligence, and risk mitigation solutions provider, is excited to announce the launch of an all new responsive and client friendly website this week.

The new website allows for secure and convenient access for current clients, and a new format which is easier for prospective clients to review available service options from this 14 year old company whose executive management pioneered the field of domestic and international background and investigative screening. The integration of a 'responsive website' allows the website to be easily viewed without loss of information on all types of devices, from desktops and laptops, to mobile and tablet devices. An SSL secured client access point provides a reliable and protected entrance for clients to review information, and submit requests for additional checks.

"Although we have an 'old-school' approach to the screening industry with a focus on diligent investigation, we knew it was time to update our website to a new responsive format, with a secure access point for clients, and updated information for anyone curious about our operation and how we can benefit their organization," says Accurate Information Systems Founder and President, Kevin McCrann.

"We have been extremely diligent in offering a secure Internet access point for our clients to provide and receive information through all our channels. Our new website will continue to ensure that all client data and information shared is secured at the highest possible level, as their confidence in AIS is the reason for our success," said Russ Harvey, Accurate Information Systems Chief Operating Officer and Managing Member.
