

DETROIT, MI, August 23, 2014 **/24-7PressRelease/** -- Service Steel, an industry-leading steel tubing distribution company in Detroit, remains true to their values by offering steel tube fabrication services. These services provide customers with world class steel tubes that are crafted around their needs. The manufacturing process includes a full line of professional cutting, drilling and machining, and custom steel fabrication.

Demand for High-quality Steel

Steel is among the most common material used in the construction of residential, commercial, and industrial establishments. The demand for this product increases with the emergence of modern technology also. Metal products are regarded for their sturdiness and durability. As structures have different preference, the shape, size, length, and form of steel also varies. Service Steel understands the need for customized steel products, which is why they offer fabrication services.

Fabrication Service Inclusions

Exact measurement is an essential aspect of structures. Service Steel offers cutting services to achieve a precise length of steel tubes. Their production cutting services include precision band sawing, cold sawing, lathe cut tube/pipe, MITRE cutting, OD/ID chamfer, and vibratory deburring. To build an effective structure, all pieces of material should fit each other. The solution for fitting problems is the company's drilling and machining service. These include CNC Vertical Machining Centers, plasma cutting, drilling and tapping, deep-hole drilling, milling, and part to print. Custom-built architectures are slowly becoming a trend in the structural industry. With Service Steel's custom steel fabrication, builders can achieve their client's preference. The service includes snap cutting, CNC laser cutting, CNC punching, grinding, honing, threading, galvanizing, plating, straightening, ultrasonic testing, heat treating, pickle and oil, electroplating, and sand/shot blasting.
