

Square Kilometre Array: The Cosmology Engine

Written by Business News

An international team of scientists have joined forces to lay the foundations for an experiment of truly astronomical proportions: putting together the biggest map of the Universe ever made. The experiment will combine signals from hundreds of radio dishes to make cosmic atlas. In a series of papers t on the arXiv.org astrophysics pre-print website, an international team of researchers set out their plans for the mammoth survey. The cosmologist Professor Dr. Dominik Schwarz from Bielefeld University in Germany is one of these researchers.
