

SAN JOSE, Calif.--([BUSINESS WIRE](#))-- [GigOptix, Inc.](#) (NYSE MKT: [GIG](#)), a leading supplier of advanced semiconductor and optical communications components, will showcase leading drivers, transimpedance amplifiers (TIAs) and E-Band products at the 39th

European Conference and Exhibition on Optical Communication (ECOC), in London on September 23, 2013. The ECOC conference is one of the largest optical communication events in Europe.

At ECOC booth #668, GigOptix will showcase a broad portfolio of products that enable:

- long-haul, metro, and short reach fiber optic telecommunications
- ER/LR/SR datacenter applications, servers and high performance computing (HPC)
- applications for the consumer market as 4K/8K TV and gesture recognition.

At ECOC 2013 GigOptix will present the latest product roadmap for drivers, TIAs and wireless point-to-point E-Band products, as well as the short-form catalog to customers. All discussions and information sharing will be done under strict confidentiality and by appointment only.

For more information and for setting appointments, please visit GigOptix booth #668 at ECOC 2013 or contact our European Director of sales, Mr. Giulio Cangini, at gcangini@gioptix.com.

About GigOptix, Inc.

[GigOptix](#) is a leading fabless supplier of semiconductor and optical components that enable high speed information streaming that address emerging high growth opportunities in the communications, industrial, defense and avionics industries. The Company offers a broad portfolio of high performance MMIC solutions that enable next
