

NTRR Develops New Technologies to Meet Growing Horticultural Demand

Written by Australian Business

SARASOTA, Fla.--([BUSINESS WIRE](#))--With U.S. horticultural crop sales projected to reach \$71 billion over the next decade, Neutra Corp. (OTCBB: NTRR) and its partners are working hard to deliver new technology innovations to help meet growing demand for life-sustaining fruits, vegetables and flowers.

As part of its new joint venture with horticultural innovators Surface to Air Solutions, LLC (S2O2), NTRR is helping market and develop a sophisticated new suite of products calibrated to produce bigger and more resistant plants. S2O2 has devised advanced, scientific systems capable of producing a cleaner, healthier growing environment for plants that accelerates photosynthesis, increases sugar production and boosts resistance to insects, fungus and bacteria.

The results are dramatically improved crop yields as well as improved shelf life—enormously important in the cultivation of nearly all horticultural produce.

Under the terms of the joint venture agreement signed last week, NTRR will partner with STA to develop and market innovations designed to make indoor and outdoor growing operations easier and more efficient to build and maintain. The company is already working with Vertigo Technologies, LLC, to advance the development and marketing of innovative horticultural production systems necessary to more efficiently deliver potent, all-natural options to chronic pain sufferers and others desperately in need of effective treatment.

By providing innovative horticultural technologies for use in the fast-growing medical marijuana (MMJ) industry, Neutra Corp. plans to follow in the footsteps of other successful public companies including Cannabis Science, Inc. (OTCBB: CBIS), Medical Marijuana Inc. (OTCBB: MJNA) and Terra Tech Corp. (OTCBB: TRTC).
