

MILPITAS, Calif.--([BUSINESS WIRE](#))--Anuta Networks, the industry's first provider of network services virtualization solutions, today announced that it is aggressively expanding its presence in Europe by establishing local office headquarters in Dublin, Ireland. To further lead the expansion, Anuta Networks is also kicking off a multi-country solution roadshow with some of the largest telecom and financial service providers in Europe who are looking to create agile cloud network service offerings in their existing data centers.

“With nCloudX, Anuta Networks has broken down one of the key barriers for achieving agility in cloud computing and protecting existing infrastructure investments,” said Chandu Guntakala, founder, president and CEO of Anuta Networks. “More and more customers around the world are choosing Anuta’s nCloudX to deliver flexible software defined data centers without needing to change their existing networks.”

Anuta Networks’ nCloudX is a breakthrough platform that simplifies and automates the complete lifecycle of network services in complex, heterogeneous networks across multi-vendor, multi-hypervisor and multi-device, including physical and virtual infrastructures in both private and public cloud deployments. The solution reduces delivery time from weeks to a few minutes for deploying multi-tenant network and services. It features a visual dynamic service designer and efficient software automation, on top of a combination of the existing hardware-controlled networks and the new generation of SDN technologies.

“The ability to deliver shared network services rapidly is extremely critical for UBC IT. UBC IT went through multiple vendors and discovered Anuta’s nCloudX which is an excellent network services virtualization product. It helps UBC IT deliver these services to more than 60000+ students, faculty and staff at 993 acres-campus and multiple data centers. The nCloudX product presents a very powerful architecture that can help solve multiple complex use cases for network services,” said Sean Wang, Network Architect for University of British Columbia (one of the largest universities in North America).

Anuta Networks will also showcase its nCloudX solution at VMworld 2013 Europe - Barcelona, Booth #E506, October 14-17.
