

BELLMORE, N.Y., Oct. 11, 2013 /PRNewswire/ -- The only FDA-cleared procedure to lift skin on these hard-to-treat areas, Ultherapy uses the safe, time-tested energy of ultrasound to stimulate the deep structural support layers of the skin--including those typically addressed in a surgical facelift--without disturbing the surface of the skin.

Natural, Noticeable Results Now there's a way to stand firm in the face of gravity--on your terms. With Ultherapy, there's no downtime, no foreign substances, no radical change; just a healthy revving-up on the inside for a natural, noticeable effect on the outside.

With Ultherapy, you can go about your day after a single, 60-90 minute in-office procedure. You will notice a short-term "boost" but the natural process of creating new, more elastic, collagen & strengthening the muscle builds over time--much like the effect that exercise has on building muscle (but without the multiple workouts!).

The Beauty of Ultherapy You will see 20% of your results immediately, and the rest will unfold over the course of 2-3 months. Some people have reported continued improvement for up to one year, including lifting and tightening of the skin on the neck, under the chin, along the jawline, and on the brow. While ultrasound does not duplicate the results of surgery, Ultherapy has proven to be an inviting alternative for those who are not yet ready for surgery.
