

BELLEVUE, Wash.--( [BUSINESS WIRE](#) )--Atigeo™, a compassionate technology company for a wiser planet, today announced an agreement with Companion Data Services LLC (CDS), a privately held company offering secure consulting, development, and managed, hosting services within the healthcare industry, to use Atigeo's xPatterns™ platform for advanced big data analytics.

"We are very pleased to work with the CDS team and marry our cloud-based big data analytics platform with their deep healthcare specific experience," said Michael Sandoval Chairman and CEO of Atigeo. "By applying xPatterns intelligence across healthcare information, CDS will drive a new era of advanced applications to improve the clinical, financial and operational performance of their clients."

As the vendor for the Centers for Medicare & Medicaid Services for more than two-thirds of the national Part A and Part B fee-for-services claims, CDS has selected xPatterns as the platform to offer and deliver advanced analytics solutions for federal, state and commercial clients. This agreement allows CDS to resell Atigeo's xPatterns as part of their robust solution offerings in healthcare information services. As a complete big data analytics platform, xPatterns quickly connects disparate data sources, automatically discover insights and relationships users might not even think to look for, and allows them to act on that intelligence.

"I am as pleased to work with Atigeo as I was impressed by the xPatterns demo and functionality," said Lola Jordan President of Companion Data Services. "Atigeo's xPatterns solution will offer our customers and prospects the ability to weave many threads of information into data that is new, meaningful and constructive."

## About Atigeo™

Atigeo is a compassionate technology company for a wiser planet. Its big data analytics platform, xPatterns™, operates in the cloud to lower any company's cost barrier for extracting knowledge from all available data, even with a legacy IT infrastructure. Enterprise-grade and developer-accessible, xPatterns makes data easier to leverage in its

native state, greatly reducing the effort, expense and limitations of analysis. For more information, please visit find us on
