

SHELTON, Conn. & RALEIGH, N.C.--([BUSINESS WIRE](#))-- [3GTMS](#) , Inc., the industry leader in multimodal transportation software solutions for shippers, LSPs, and carriers, announced today that [Tompkins International](#) , a globally recognized leader in supply chain consulting and services, has selected LTL rating tools from 3Gtms to support network planning and design, as well as optimize transportation networks for their clients.

“Our distribution network design services play a key role in optimizing cost and service, so it’s critical to have a rating tool that provides accurate LTL base rates,” says Gene Tyndall, Executive Vice President of Tompkins International. “3Gtms greatly simplified all aspects of our rating requirements by providing us with one tool for less than what we currently pay—and the transition was seamless,” he adds.

Instead of using multiple tools for an effective and complete analysis of distribution networks, 3Gtms provides a solution that yields improved rating results.

“Customers use our neutral tariff and other rating products because they want better technology at a fairer price than what is being charged by rating bureaus,” says Mitch Weseley, CEO of 3Gtms. “3G Continental is a non-carrier based neutral LTL tariff, licensed independently or as part of our [LTL Rate Management Suite](#) for extreme flexibility,” he notes.
