

Parcel2Go: The Future of Delivery between Google Robots and Amazon Drones

Written by Australian Business

MANCHESTER, England--([BUSINESS WIRE](#))--With Amazon announcing the launch of their Prime Air Project, Google too has decided to pitch itself as a worthy competitor in the parcel delivery race with the use of robots – a concept that

[Parcel2Go](#)

thinks will take the retail industry by storm.

Technology's ability to take huge leaps and bounds has allowed it to shape a number of different marketplaces – from personal pleasure to business productivity. And as consumers demand more instant gratification (thanks to on-demand technology enabling short-term solutions such as mobile payments and sharing content), companies are seizing the opportunity to have their goods distributed immediately – with the likes of Amazon and Google only too happy to help.

Les Yates, Marketing Executive, said: "Our broad experience has made us a household name both in the UK and overseas – and it's our reputation that has helped us establish a number of successful partnerships with many a leading courier service.

"What we've come to notice through our international connections is that with ever-changing trends, so the marketplace has had to make the relevant adaptations. We believe it's time that such elite technology is now readily accessible and available for each and every customer, and look forward to such innovations improving the modern landscape."

Parcel2Go already delivers packages to an impressive 240 countries, working with a number of [parcel suppliers](#) to process huge volumes of orders quickly and effectively.
