

FLEET, England, September 12, 2013 /PRNewswire/ --

Solution validation recognises Anite's channel emulation expertise

Anite, a global leader in wireless equipment testing technology, today announced that a leading North American mobile operator has validated Anite's new data performance testing solution. The operator uses Anite's testing solutions in their device acceptance programme to evaluate new LTE devices prior to market launch, helping to improve the end-user experience and customer satisfaction. Anite's solutions furthermore contribute to reducing the mobile operator's testing costs and time to market. Device manufacturers also benefit from this new solution during the R&D process, helping to ensure that their devices meet the operator's challenging performance requirements.

Performance testing in a lab-based environment replicates 'real-world' conditions and scenarios. Precise, automated and repeatable, it enables device attributes such as data throughput, impact of signalling and audio quality to be cost-effectively measured and optimised. This enables operators, as well as device and chipset manufacturers, to be more confident that their product will meet end-user expectations.

The validated solution is designed around SAS (Anite's interoperability test solution) and utilises the channel emulation capability of the Anite 9000 platform. Such an approach provides customers (including those using TD-LTE technology) with a cost-effective software upgrade to their existing solution, based on the Anite 9000 platform. As a result, customers are able to conduct data performance testing on an integrated single system as part of the overall device acceptance testing programme.

"The validation of Anite's new data performance testing solution by a leading North American mobile operator clearly demonstrates confidence in Anite's performance testing solutions", says Paul Beaver, Products Director at Anite.

About Anite

Anite provides a comprehensive range of critical IT solutions to the Wireless and Travel sectors across the globe. Listed on the London Stock Exchange, Anite develops and implements software as well as provides consultancy, systems integration and managed services to ensure that our customers operate effectively and securely. By using the latest technologies to deliver quality and cost-effective solutions, Anite meets customers' specific requirements and realises tangible results for its clients.

Anite offers industry leading device and network test solutions for an enhanced end-user experience. Its rigorous and intuitive test solutions accelerate new device launches and ensure optimised network performance. As a global market leader with over 20 years' experience, Anite provides cutting-edge technology to a wide range of customers including device, chipset and network equipment manufacturers, mobile operators and test houses. Anite's key partners rely on its expertise and highly flexible, reliable test solutions.

Headquartered in the UK, Anite has offices in 16 countries across Europe, America, Asia and the Middle East
