

MORRISTOWN, N.J., Sept. 12, 2013 /PRNewswire/ -- While Hispanic moms have traditionally and culturally relied on home remedies to help alleviate their children and family ailments, when it comes to fever and body aches, it is important to administer medicine like acetaminophen. Acetaminophen is one of the most recommended non-prescription medications by healthcare professionals for fever reduction and the relief of minor aches and pain in infants and children. Since some sick infants and children may be unable to take oral medication for their fever or pain, using a FeverAll® Acetaminophen Suppository provides a safe, reliable way for Hispanic moms to care for their sick children.

FeverAll®, the top national brand of acetaminophen in suppository form, is available at major retailers and drugstores throughout the U.S. For more than 20 years, parents and caregivers have relied on the accuracy and ease-of-use of FeverAll®. It offers caregivers of children six months and older a fever-reducing, pain-relieving alternative to liquid acetaminophen. By using pre-measured FeverAll®

Acetaminophen Suppositories, parents can be confident their child has received the exact dosage of acetaminophen recommended for their age every single time. At less than one-inch in size, it is easy to administer and smaller than other acetaminophen suppositories.

"Acetaminophen suppositories provide a safe dosing and peace of mind for Hispanic moms with young children in need of a fever reducer/pain killer," commented Dr. Aliza Lifshitz.

"Suppositories provide a great alternative to measuring liquid medicine, struggling with a feisty toddler or worrying if the child swallowed the full/proper dose because they're spitting or acting up."

Keep FeverAll® On Hand At Home As Part Of A Fever-Fighting Arsenal In the middle of the night, groggy and stressed about a child's wellbeing, Hispanic moms and caregivers need smart solutions they can rely on every time. This is why healthcare professionals recommend FeverAll®

.[]

FeverAll® offers Hispanic moms peace of mind, because they can be sure that they have accurately given the correct, measured dose of acetaminophen to their infant or child every time and that the child did in fact get all the medication needed.

FeverAll® Acetaminophen Suppositories Offer A Great Choice For Hispanic Moms Of Small Children

Written by Australian Business

FeverAll® Infants' Strength is the only infant acetaminophen on the shelf with on-label dosing instructions for children ages six months to two years old.

For further information on FeverAll® Acetaminophen Suppositories, go to www.FeverAll.com .

About FeverAll® FeverAll®, manufactured by Actavis Mid Atlantic LLC, is the top national brand of acetaminophen in suppository form and is the only acetaminophen suppository available and approved for infants as young as 6 months of age. At less than one-inch in size, FeverAll®

is smaller than other acetaminophen suppositories, which makes it easier to administer in infants and children. The suppositories come in plastic, color-coded, easy-for-adults-to-open packaging and are available in 3 strengths, ensuring that children get the proper dosage of acetaminophen throughout childhood. FeverAll®

Infants' Strength (80 mg of acetaminophen) is indicated for ages 6 to 36 months; FeverAll®

Children's Strength (120 mg of acetaminophen) is indicated for ages 3 to 6 years; and FeverAll®

Jr. Strength (325 mg of acetaminophen) is indicated for ages 6 to 12 years. FeverAll®

is available at major retailers and drugstores across the U.S., including Rite Aid, Walgreens and Walmart, for a suggested retail price of approximately \$8.00 USD

for a package of 6 suppositories. Find more information at www.FeverAll.com
