

LOS ANGELES, Sept. 18, 2013 /PRNewswire/ -- As a top-notch [plastic surgeon in Los Angeles](#), Dr. David Feldmar must do more than use his highly-skilled hands to improve a patient's appearance; he must also make recommendations based on desired results, patient's health and other considerations. For instance, while many women come in asking only for liposuction, he may inform them that they would be a better candidate for both, due to skin's condition or other factors. Dr. Feldmar has long been aware of the fact that liposuction in conjunction with a [tummy tuck in Los Angeles](#) can yield the best cosmetic outcome; this was recently confirmed in a study published last month in the medical journal of the American Society of Plastic Surgeons (ASPS).

"Lipoabdominoplasty," or combined tummy tuck with liposuction, is what Dr. Feldmar often recommends when his patients voice their concerns regarding a saggy abdomen along with stubborn love handles. While liposuction can target unwanted fat deposits, a tummy tuck is an excellent choice for removing sagging skin and fat, as well. Dr. Feldmar is able to sculpt new, soft feminine curves by removing excess fat from the abdomen and flanks, commonly called the love handles; and he also removes the excess abdominal tissue and loose skin of the abdomen with a tummy tuck. This new ASPS study points to the fact that combining the two techniques is less traumatic to the tissues of the abdomen, meaning recovery times are quicker and complication rates are lower.

Dr. Feldmar's [mommy makeover in Los Angeles](#) is a related, incredibly popular procedure, and as the name suggests, women often ask for it after childbearing has changed their bodies. A mommy makeover is the popular name for a series of cosmetic procedures, frequently including a tummy tuck, liposuction and breast augmentation and/or lift. These procedures not only improve the contours of a woman's body, they give her renewed energy and vigor to deal with the rigors of motherhood. Although many women yearn to have their taught bodies back, having children can permanently alter the body and no amount of diet or exercise can change it. Fortunately, an expert plastic surgeon such as Dr. Feldmar can help turn back the clock after childbearing has made breasts droop or lose volume, or address a saggy abdomen if the skin does not retract like a rubber band after she loses her baby weight.

With extensive experience in all forms of plastic and reconstructive surgery, Dr. Feldmar has knowledge that reflects the latest medical advances in the field. If you are considering

Dr. David Feldmar Agrees Tummy Tuck and Liposuction Used Together Provides Best Results
