) Dr. Anthony Ramirez, a well-respected Brooklyn dentist, incorporates
[cone beam technology](#)
and
[CEREC®](#)

into his practice to provide a premier dental experience. His professional goal is to offer an unmatched standard of care involving innovative modern dental advances and a personalized lifetime strategy for each of his patients.

Utilizing the revolutionary equipment and technology of CEREC®, the doctor creates permanent crowns within fifteen minutes. Additionally, with the 3-D CBCT imaging technology Dr. Ramirez visualizes bone anatomy, bone defects and nerves in their exact locations, which enables him to make better clinical decisions. As a result, the patient benefits with a customized treatment schedule and a faster resolution to their individualized dental issue. In the doctor's own words, "With this state-of-the-art 3-dimensional x-ray imaging technology I can identify, reveal and propose a treatment plan and treat my patients efficiently and effectively. With these images I can see vital anatomical structures without distortions in real dimensions- improving my diagnostic ability, surgical planning and patient communication."

A pioneer in the field of digital dentistry, Dr. Ramirez recently performed a live implant surgery during the Sirona 3-D Summit on June 28, 2013 which is a testament to his unique level of skill.

A full-service dental practice in Brooklyn, New York, the office of [Dr. Anthony Ramirez](#) specializes in cosmetic smile redesign, porcelain veneers, crowns, bridges, Invisalign, full mouth rehabilitation, whitening, periodontal treatments and root canal therapy. The office provides flexible hours, including evening appointments.
