

AUSTIN, Texas, Nov. 11, 2013 /PRNewswire/ -- Steven E. Zimmet, M.D. Director of [Zimmet Vein and Dermatology](#)

of Austin, Texas announces the introduction of the first Tri-Beam Q-Switch laser system available in Texas . The Tri-Beam Q-Switched Nd:YAG laser is specially designed for tattoo removal, treatment of pigmented lesions, melasma, acne, and non-ablative skin rejuvenation. The Tri-Beam also delivers a means to improve skin tone and texture.

Tri-Beam is safe for all skin types yielding an improved appearance for patients with little to no down time. "Advancements in laser technology have dramatically improved the tools we have to treat a wide variety of skin conditions. The Tri-Beam, being one of the few fractional Q-switched lasers available, really advances our laser armamentarium. With the Tri-Beam, we are able to more effectively address a variety of skin problems" says Dr. Zimmet.

"Eclipse Aesthetics, LLC, the exclusive US distributor for the Tri-Beam, is honored to have such an established and respected practice as that of Dr. Steven E. Zimmet. Dr. Zimmet has been a highly regarded leader in the area of cosmetic lasers and dermatological care for many years. The fact that Dr. Zimmet selected the Tri-Beam for his practice brings instant credibility to this new technology," says Tom O'Brien, Founder and CEO of Eclipse Aesthetics LLC.
