) Waterford, MI – Dr. Richard J. Baker, DDS, PC, of Your Smile dental, has begun offering the convenience of mini dental implants for patients in his community who are suffering from multiple missing teeth.

Missing teeth can be a complicated oral health issue. Without your natural tooth root, many patients begin to experience diminished bone in the jaw or even the shifting of existing teeth to make up for gaps in their smile. Dr. Richard Baker understands how much discomfort and damage that whole missing teeth can inflict. In an effort to provide the best care for members of his community who are experiencing these issues, Dr. Baker's practice has begun offering the mini [dental implant](#).

Dr. Baker explains, "Because the mini-implant is more cost effective and easier to install than traditional implants, I can serve more patients who are missing multiple teeth. Missing teeth can present a variety of complicated oral health issues, but with the advances offered by the mini-implant, fewer people will have to deal with these side-effects."

Mini-implants are specifically used to effectively stabilize dentures. Once the implants are placed, patients can enjoy secure dentures and a greater sense of confidence. Eating comfortably, smiling and laughing without fear of loose dentures are huge advantages. On average, mini-implants are less costly than traditional dental implants and require less time to install and heal. Getting mini dental implants involves a one-step procedure and only requires a local anesthetic, with no sutures or the typical months of healing.

"The ease of treating patients with mini-implants makes it more accessible, which means I can give more patients the smiles they've been hoping for. Mini-implants also allow my patients to

eat the foods they love and to care for their teeth with a hassle-free oral care routine", Dr. Baker adds.

The mini-implant is a welcome solution for the large number of dental patients who often feel that removable dentures are the only option that fit with their budget. With the advanced dental services offered by Your Smile, people suffering from the slurred speech and dietary restrictions that come along with traditional dentures can improve their overall oral health via mini dental implants.

About Richard J. Baker, DDS, PC, and [Your Smile](#) Dr. Baker has been caring for patients at his Waterford dental practice for over 30 years. His Your Smile dental office was designed by renowned dental office architect, Micahel Unthank, in order to provide a welcoming atmosphere for both new and existing patients. All members of the Your Smile staff focus on family-friendly service and are able to treat patients as young as 3 years old. Patients are treated to comprehensive care and can even be notified of upcoming appointments via text or e-mail.
