Dr. Sands offers extensive treatment solutions, including dental implants, porcelain crowns, porcelain veneers, teeth whitening and Invisalign. Visit <http://www.beverlyhills-dental-implants.com> to learn more.

Virtually anyone who has lost one or more teeth may be a candidate for dental implants. Patients should enjoy good dental health and have adequate jawbone density. The complication rate for dental implants is extremely low, and more than 95 percent of patients who have had implants placed still have them over 15 years later. Dr. Kevin Sands, Beverly Hills dental implants expert, offers comprehensive evaluations that allow patients to learn more about the procedure and determine if they are candidates so that they can decide if dental implants are right for them.

Implants are more cosmetically appealing than other types of restorations because they are designed just like natural teeth. However, they are also healthier. When a tooth is lost, the bone

around the tooth is also lost. This process can START immediately after the loss of the tooth and can continue, which threatens the health of the teeth that are adjacent to the gap. Restoring the tooth root using dental implants keeps the jawbone stimulated and strong because the bone tissue is adequately stimulated and so grows into and around the implant.
