residents look to for their oral health needs. These local patients have shown a particularly strong investment in the dental group's expertise in

[anti-aging dentistry](#)

Aging can have a great impact on the teeth, as years of improper biting, jaw clenching and discoloration change the look of not only the mouth, but the entire face and overall appearance. West Hills Smiles is proud to offer numerous dental procedures to combat these years of wear and tear. These treatments create an impressive transformation and can boost self-esteem in as little as one appointment.

West Hills Smiles keeps up with technological advancements to make anti-aging dentistry comfortable for patients while making the changes look incredibly natural. While some patients come to West Hills Smiles' office complaining about tooth discoloration, our expert staff may suggest other work which could enhance a patient's smile. Even patients requesting a total smile makeover are often pleasantly surprised once West Hill Smiles' dentists Dr. Pasha Hakimzadeh and Dr. Ben Reyhani determine what can be changed after a full mouth analysis while taking the patient's wishes into account. This may include adding natural-looking porcelain veneers to chipped, broken or otherwise damaged teeth, which can fill out the mouth and even smooth out fine lines around the lower one-third of the face.

Outdated methods to correct dental problems such as silver amalgam fillings (which contain mercury) are a thing of the past, and patients at West Hills Smiles are routinely given fillings which perfectly match the shade of their teeth. This ensures the patient can feel totally confident about their smile, even if they throw their head back and laugh, that no one will detect obvious silver or black fillings. The same VIP treatment is given to patients who need extensive full

mouth reconstruction through techniques such as dental implants, inlays, onlays, bridges or crowns. Dr. Reyhani and Dr. Hakimzadeh's use of these implants leave the teeth looking perfectly natural. What's more, these alterations to the teeth correct many bite and balance issues, preventing further damage from occurring.

The West Hills Smiles team is highly knowledgeable and friendly. Our team includes dentists, periodontists, dental hygienists, an in-house porcelain artist, and support staff. Besides anti-aging dentistry, West Hills Smiles strongly emphasizes their skills as general and restorative dentists, and their ability to address all dental issues from routine cleanings to full mouth reconstruction. To learn more, visit www.westhillssmiles.com or call West Hills Smiles at (818) 963-7901.
