

Preferred Plumbing, Heating And Air Conditioning Provides Rules To Keep Disposals Running

Written by Australian Business

(PRLEAP.COM) Preferred Plumbing, Heating and Air Conditioning has some simple rules as well as a powerful new model disposal that will help home owners avoid the common block and clog of disposals that lead to expensive repairs.

Preferred Plumbing, Heating and Air Conditioning recommends the Waste King 8890 disposal to homeowners. This high-speed disposal efficiently gets rid of food waste and is sound insulated for quiet operation. They also offer a lifetime in-home warranty.

"We feel the Waste King is one of the best disposals on the market," said Bruce Smith, President and General Manager of Preferred Plumbing, Heating and Air Conditioning. "Also, we think it's important for homeowners to learn what should and should not go down your kitchen sink. This, along with proper maintenance will extend the life of your garbage disposal."

DO's Do grind food with a strong flow of COLD water. Do grind peels from citrus fruits to freshen up the drain and keep it smelling clean. Do cut large items into smaller pieces.

DON'T Don't put anything in that is not biodegradable food. Don't grind glass, metal, plastic, bones, fibrous materials (corn husks), coffee grinds. Don't pour fat, oil or grease. Don't turn off the water until the grinding has completely stopped. Let the water run 10-15 seconds after you have shut off the disposal.

For more information on the Waste King Legend Series 9980 as well as how to keep your disposal running efficiently call 760.863.0832.

About Preferred Plumbing, Heating and Air Conditioning: Preferred Plumbing, Heating and Air Conditioning is a locally owned and operated company providing professional repair, replacement and installation services on plumbing, heating and air conditioning systems.
