

TechniTrader Fall 2013 Lab Courses Starting September 24, 2013!

Written by Australian Business

AUBURN, WA, September 12, 2013 /**24-7PressRelease**/ -- TechniTrader Fall 2013 lab courses starting September 24, 2013!

Registration is NOW open for the Fall 2013 Lab Classes at TechniTrader starting on Tuesday, September 24th, 2013. Below is a preview of the classes that will be available for registration.

Lab Classes are 4-10 week on-line courses that are offered in a semester style format. Each lab class takes a specific topic that is explained in great depth. Graphs, charts, and other visual tutorials are used to aid the student in learning the material quickly.

Lab Classes are developed and taught by Martha Stokes CMT a Master Technical Analyst for Decisions Unlimited, Inc. and instructor and co-developer of the TechniTrader educational programs.

Lab class students may ask questions during the lab class and Ms. Stokes will answer these questions the following week in the lab class. This gives you a personal connection to Ms. Stokes to help you understand all of the material presented during the lab class. This is a hands-on class and there will be some homework assignments with a review of the assignment the following week.

Lab classes are posted on our student site, there is one lesson per week for the duration of each course.

To register for a lab class email Cheryl@technitrader.com .

REMINDER: TechniTrader students that are subscribed to any of our online subscriptions can choose a lab for free!!!! More information on becoming a subscriber is given below.

Class 1: Sector Rotation

The Sector Rotation lab class is designed to teach the student how, when, and why sectors, industries, and investing instruments cycle either in a harmonious or synchronized manner. This in-depth lab class will expose popular myths about sector rotation and why most the modern industry rotates differently than it did in decades past.

Understanding how, when, and why sectors rotate, what chart patterns form that reveal a sector rotation is under way and why this impacts what stocks you should study for buying or selling short will be covered in detail.

The Sector Rotation lab class will include a complete analysis of each sector and industry for 2013 setting up the student for next year's trading and investing, showing what sectors are topping, what sectors are bottoming, and how long it will take to complete these bottoms and tops and what sectors will continue to outperform the rest of the market.

This lab class will benefit position traders, intermediate term traders, options players, and long term or leap investors.

Experience Level: All

Start Date: 9/24/13 8 week Lab Class Session Cost: \$299 Student Early Registration: \$129

Class 2: New Technology Stock Cycle Part II

Now that you understand the phases of the New Technology Product Cycle, this second half of the lab class will explore how, why, and when stock prices are affected by this all-encompassing cycle. Learn how to identify chart patterns that reveal where a stock is in its product cycle. Learn how to identify when the stock is on the cusp of a major downside reversal, early. Learn when to buy into stocks early in the cycle to increase your profitability. This lab class will help both the long term investor and trader buy and sell at the right time.
