

Impact Plastics Introduces a High-Performance, Revolutionary New Lid

Written by Australian Business

HUNTLEY, IL, September 12, 2013 /**24-7PressRelease**/ -- Impact Plastics, an industry leader in providing superior quality, environmentally friendly solutions for the waste industry, is excited to announce the launch of its new, technologically-advanced Double Impact "Wedge" Lid.

"Making a great lid (Double Impact) even better (Double Impact "Wedge") is a testament that we are committed to delivering innovative technologies to our customers," said Scott Lemajeur, Owner of Impact Plastics. "Complete customer satisfaction and product reliability is our top priority."

A paramount feature of this new, Double Impact "Wedge" Lid is a 20% thicker hinge line than the previous Double Impact Lid. The proprietary innovation behind this even tougher hinge line is the result of looking for technology that simply didn't exist. Impact Plastics then chose to invest in its own technology, to create a lid unsurpassed in the Waste Industry. Another significant detail is the stronger, wider "rib-in-rib" structure, which helps the lids to spring back into shape quickly after being dumped into a garbage truck.

Several customer test sites were thrilled with the state-of-the-art technology of the Double Impact "Wedge" Lid. With no seams to split and fill with water, along with a six-knuckle, high-quality, extra-thick hinge line, Impact Plastics assures that even less lids will need replacing. The lids are also "Green" with up to 10% Post-Consumer Regrind (PCR) and are 100% recyclable.

ABOUT IMPACT PLASTICS Impact Plastics is an industry leader in providing superior quality, environmentally friendly solutions for the waste industry since 1999. Focused on providing long lasting dumpster lids and parts with exceptional customer service, Impact Plastics guarantees unsurpassed quality, reliability and performance in the field. And we continue to launch new generations of products to match the needs of our valued customers. Product offerings include tough, commercial container lids, recycling lids, organics lids, casters, 100% recycled wheels, roll off parts and "Green" solutions.
