

LiveTracGuardian Announces GPS Tracking Solution for Heavy Duty Trucks

Written by Australian Business

SAN RAMON, CA, September 13, 2013 **/24-7PressRelease/** -- LiveTracGuardian announced the availability of a wired GPS tracking unit suitable for heavy duty trucks and older passenger vehicles starting October 15, 2013. This adds to the portfolio of GPS tracking solutions available from LiveTracGuardian and as with their other solutions, provides a very affordable and advanced platform, passing on immediate and significant savings to truck owners.

" The new wired device based on the Calamp 710 continue our tradition of offering advanced GPS solutions at extremely competitive costs" says Thomas Van Demark, Director of Media Relations at LiveTracGuardian. "Our offering is the lowest costing solution in North America. The device is suitable for all vehicles and is particularly suited for heavy duty trucks and older passenger vehicles that do not have the OBD2 port."

Rayvin Randhawa, Director of Sales at LiveTracGuardian says " The LiveTracGuardian solution puts an affordable GPS tracking solution in the hands of truck owners. It provides location, speed, ignition on/off, geofencing and vehicle idling alerts. Options are also available for I/O monitoring. In fact most truck owners will find our first year device and subscription cost to be lower than the subscription costs alone for most of our competitors. "

Randhawa says "Coupled with our low cost solution is our extremely user friendly software platform. Unlike complex and difficult to use platforms that are in much use today, we have considerably simplified the user interface. Most users can get started in less than 2 minutes. We look forward to build partnerships with trucking companies or companies that own heavy duty fleet vehicles. We guarantee that they will be satisfied with our service and support"

LiveTracGuardian provides the most comprehensive GPS tracking platform at the lowest cost in North America. Monthly subscription rates are \$10 per month, and that includes mileage, fuel reports, real time diagnostic alerts, tow alerts, geofencing and much more. The LiveTracGuardian platform collects data in real time and provides an extremely user friendly web based platform to access logged data and set alerts.
