

Bolingbrook Dental Care Replaces Missing Teeth With Dental Implants In Bolingbrook

Written by Australian Business

BOLINGBROOK, IL, September 14, 2013 **/24-7PressRelease/** -- Whether a patient has lost a single tooth or multiple teeth, it can be discouraging. To help patients regain their smiles, Dr. Rani Seeth of Bolingbrook Dental Care continues to offer dental implants. When a tooth is missing, Dr. Seeth maintains the ability to offer dental implants in Bolingbrook to create restored smiles.

"Patients don't have to put up with gaps in their smiles, which is why I am happy to continue to offer dental implants for my patients in Bolingbrook," said Dr. Rani Seeth about Bolingbrook dental implants. "A smile that has gaps takes away from a glowing smile, causing many people to hide their teeth from others. With dental implants, patients can say goodbye to an embarrassing smile, and hello to a flawless smile without gaps."

Each case of missing teeth is different from patient to patient. For many patients, however, the implant procedure involves two phases, beginning with the surgical implant insertion. During this first session of placement, Dr. Seeth, a Bolingbrook, IL dentist, surgically places the implant into the jawbone. This insertion takes the place of the missing tooth root.

Over the course of three to six months, the implants are left to attach themselves to the bone, creating a solid and stable foundation for the replacement teeth. The second session of the implant procedure involves attaching the newly created teeth to the anchored dental implant. Finally, at a patient's last visit, Dr. Rani Seeth, a dentist in Bolingbrook, will make a crown, which is attached to the implant post. A patient's new, restored smile will look, feel, and function just like their natural teeth.

"Missing teeth can result in an older appearance, discomfort and inconvenience from dentures, pain, difficulty eating and speaking, and an overall less active lifestyle. Since implants are securely attached, patients can gain confidence to eat what they like, speak clearly and have freedom from embarrassment," stated Dr. Seeth about dental implants in Bolingbrook.

Not everyone is a good candidate for dental implants. Patients must have healthy gums and adequate bone to support the implant. The patient must also be committed to good oral hygiene, including exceptional oral hygiene and regular visits to Dr. Seeth at Bolingbrook Dental Care.

Patients who have lost one or more of their natural teeth can continue to live their life with confidence with the help of dental implants from Dr. Rani Seeth at Bolingbrook Dental Care.

Bolingbrook Dental Care Replaces Missing Teeth With Dental Implants In Bolingbrook
