

NEWARK, NJ, September 14, 2013 **/24-7PressRelease/** -- EnviroFry announces the introduction of high-tech mold inspection and mold removal services for Jersey homes, apartments, offices, and commercial and government buildings in Bayonne, Brick, Camden, Cherry Hill, Clifton, East Orange, Edison, Elizabeth, Franklin, Gloucester, Hamilton, Hoboken, Howell, Irvington, plus

Jersey City, Lakewood, Middletown, Newark, New Brunswick, North Bergen, Old Bridge, Parsippany, Passaic, Paterson, Perth Amboy, Piscataway, Plainfield, Toms River, Trenton, Troy Hills, Union City, Wayne, West New York, and Woodbridge.

Company personnel available for New Jersey mold inspection and mold removal assignments include Phillip Fry and Divine Fry, company co-managers, who are both Certified Environmental Hygienists, Certified Mold Inspectors, Certified Mold Remediators, and environmental management consultants, plus Todd Strickland, Certified Mold Remediator, who also has extensive mold removal and construction experience nationwide.

Phillip Fry became the first full-time mold inspector in the USA, starting his nationwide mold inspection business in 1999, two years ahead of when most people become aware of the health dangers of exposure to toxic mold as the result of Dan Rather's "48 Hours" magazine program on CBS-TV in 2001 that reported in detail about the Stachybotrys mold infestation problem that ruined the health of a young family living in a newly-constructed, mold-infested home in Dripping Springs, Texas.

The EnviroFry team utilizes the latest and best high-tech methods and equipment to find, kill, and remove toxic mold growth that may be hidden inside walls, ceilings, floors, attics, basements, crawl spaces, and heating/cooling equipment and ducts. For example, EnviroFry kills mold with high output ozone gas and EPA-registered fungicides as part of comprehensive and complete mold remediation.

New Jersey state residents and businesses can learn more about EnviroFry mold testing and mold remediation services by visiting the website <http://www.jerseymoldinspection.com>, plus the national websites <http://www.ozonegeneratorkillsmold.com>, <http://www.airconditionermold.com>, <http://www.workplacemold.com>, and <http://www.moldexpertconsultants.com>.

Exposure to elevated levels of mold infestation at home or at work can cause over 100 major illnesses and diseases, according to Mr. Fry, who is author of Mold Health Guide and four other

EnviroFry Introduces High-Tech Mold Inspection and Mold Removal for New Jersey Homes and Workplaces
