

Katy Dentist Offers One-hour Whitening For Sparkling Smiles

Written by Australian Business

KATY, TX, September 14, 2013 **/24-7PressRelease/** -- Many people today are not happy with the appearance of their smiles. At Hamon, De Buyl and Associates, DDS, LLP, patients can experience improved smile appearances with one-hour whitening treatments. With one-hour whitening administered by Dr. Hamon and Dr. De Buyl, Katy dentists, patients can achieve brighter, whiter smiles that they have always wanted with long-lasting results.

"Whitening treatments are designed to get your smile looking its best, having effectively restored the smiles of people with stained, dull, or discolored teeth for many years. Tooth whitening from our office is one of the quickest and most cost-effective cosmetic dental procedures available to improve the look of your teeth," said Dr. Arnaud De Buyl, a dentist in Katy.

One-hour whitening is a bleaching process that is widely used around the world to lighten and eliminate discoloration of enamel and dentin. The complete teeth whitening procedure takes approximately an hour, but a regular teeth cleaning is recommended before treatment can begin. Dr. Hamon and Dr. De Buyl, dentists in Katy, will begin by covering a patient's lips and gums, leaving only the teeth exposed.

Next, the whitening gel will be applied, which works to penetrate the teeth and break up the stains and discoloration. The gel will remain in place for approximately 15 minutes while the light is activated. The bleaching gel will be applied for three 15-minute sessions of light activation to give patients the smile he or she desires. Once the sessions are complete, a sensitivity-reducing fluoride paste-gel is applied to the teeth to lessen or eliminate tooth sensitivity.

Additionally, Drs. Hamon and De Buyl, Katy, TX dentists, also offer take home whitening kits for patients who wish to whiten in the comfort of their own homes. When used directly, these whitening kits provided by Hamon, De Buyl and Associates, DDS, LLP, can produce dramatically whiter teeth over the source of treatment.

"While you may be able to easily get over the counter whiteners without our recommendation, you can over use them, which can harm your tooth enamel and irritate your gum tissue," said Dr. Hamon, a Katy family dentist.

Patients who are unhappy with the appearance of their smile can visit Dr. Hamon and Dr. De Buyl for further consultation on an appropriate treatment plan to enhance their smile.
