

E.B. Tool Company Supports the Do-It-Yourself Handyman and Builder

Written by Australian Business

GAYS MILLS, WI, September 15, 2013 **/24-7PressRelease/** -- Do-it-yourself (DIY) handymen are a unique breed: tough, innovative, and committed. Founded by DIY builders, E.B. Tool Company understands the passion of the family handy man and works to build tools for carpenters at every level, with special consideration for home maintenance and woodworking projects. E.B. Tool Company's revolutionary products help hobbyists and homeowners alike get projects done quickly and within budget.

One of the carpenters' tools invented and offered by E.B. Tool Company is the KwickGripper. With just this one DIY shop tool, carpenters can make headless nail removal and screw removal simple. The Kwick Gripper is a two-headed DIY tool that makes large deconstruction projects and basic home jobs a breeze while eliminating the need for a DIY tool box full of miscellaneous tools.

Because of its novel design, the KwickGripper converts pulling force into gripping force. Though a typical claw hammer may multiply input force by up to six times, the KwickGripper multiplies pulling power by more than 12 times. Additionally, with the various built-in functions, the KwickGripper is a nail removal, screw extractor, and bolt extractor tool that can remove damaged and difficult fasteners with ease.

When a DIY handyman or builder has a project, the KwickGripper from E.B. Tool Company will help with gripping in small or difficult-to-reach places, material preservation, obstacle elimination, and fatigue and muscle strain avoidance. With these assists, the Kwick Gripper helps DIY handymen and builders avoid construction frustration and move forward with getting projects done.

The KwickGripper is ideal for:

- Unsightly or broken nail replacement
- Furniture creation or repair
- Drywall and siding repair
- Removing crown molding and trim
- Deck renovation
- Roofing or gutter projects
- Reuse of old or reclaimed wood
- Deconstructing wooden pallets
- Removing dangerous rusty or loose fasteners
- Wood crafting or art
- And more

Based in Gays Mills, Wisconsin, E.B. Tool Company is an innovative business offering the groundbreaking DIY tools carpenters need, such as the Kwick Gripper. Invented by the father-son team of Eric and Ben Eby, the Kwick Gripper was created to make nail removal jobs easier even in difficult situations. Learn more about the Kwick Gripper tool and E.B.
