knows that the trucking industry has proven a major force behind innovation in America. However, as truckers and their efficient shipment solutions have helped spur development on a nationwide scale, many professionals have begun to assess how the trucking profession is progressing as an industry itself. According to PMT, the trucking industry is not only becoming more efficient, but is employing state-of-the-art technology to ensure that the profession and the businesses it serves continue to thrive.

In order to highlight the exciting progress that is being made within trucking industry operations, Paul Miller Trucking points to a recent [article](#) from Fox Business that addresses the matter. The article examines how innovative logistics technology has not only improved internal operations for trucking companies, but has also enhanced the cargo solutions that many growing industries rely on to achieve rapid progress.

In a recent press statement, Paul Miller Trucking responds, "In addition to hiring highly-skilled and certified drivers who provide the highest level of on-road safety and secure delivery of cargo, Paul Miller Trucking also employs a wide array of state-of-the-art technology to ensure customer satisfaction. Our PMT Logistics division has gained recognition for offering our clients exceptional management over cargo and shipments, no matter what the capacity. Clients in the warehousing market can rely on our logistics services to make sure that all shipments are managed accurately and distributed on time."

While logistics may be driving the trucking industry forward, the Fox Business report acknowledges that there are other looming concerns facing the market--such as the cost of oil.

For instance, the article states, "As the Syrian crisis continues, some analysts worry that unrest in the region will cause oil prices to spike. But in an edition of Conference Room, the leaders of trucking companies Echo Global Logistics and Monroe Transportation tell FBN's Jeff Flock that they're not too worried about rising oil prices." According to PMT, these companies are accurate when noting that the rising oil prices are unlikely to impact the overall growth and performance of the trucking industry.

"Oil prices are a factor that the trucking companies have had to observe on a daily basis. The fluctuations that occur--in time of crisis or not--have remained steady and frequent and customers should not be too concerned about this matter driving up trucking rates. In terms of technology, strong management solutions, such as PMT Logistics, make shipping operations

more efficient and reduce cost. This considerable savings could be more than the fluctuations noted in oil prices," Paul Miller Trucking concludes in its press statement.

ABOUT:

Paul Miller Trucking is dedicated to shining above other businesses in its industry. This trucking company provides top quality trucking services around the United States. While the business tends to focus its efforts in the central-Eastern parts of the country, its extended corridor expands across the entire mainland United States. Paul Miller Trucking is actively involved with the community. The business contributes to the Make A Wish Foundation and the Neighbors Helping Neighbors Foundation. It is also a proud sponsor of National Driver Appreciation Week.
