

NEW YORK, NY, September 19, 2013 /**24-7PressRelease**/ -- Those rare individuals with the gifts, drive and right brain/left brain skills to excel in more than one field are known as polymaths, and the most interesting among them are being profiled in novelist/periodontist Alan A. Winter's new [Richly Gifted Blog](#)

From heads of state to musicians, scientists, physicians and athletes, [Richly Gifted Blog](#) examines not just the skills, but also the common characteristics of those who balance two careers, from Albert Einstein (physicist and violinist) to Casey Stengel (dentist and sports icon) to Leon Theramin (composer, inventor, KGB spy) and Colonel Sanders (ferry boat captain, lawyer, chicken magnate) and scores more.

Winter just released his third novel, [Savior's Day](#), a suspense thriller that weaves together an open case from Israel's vaunted spy agency, the Mossad, with a newly elected Pope whose unlikely background makes him the best candidate to broker a Middle East peace agreement.

Savior's Day tackles the unsolved mystery that surrounds the 10th century Codex of Aleppo, which has been sanctified as the greatest Bible ever written. Winter's novel chronicles actual events and speculates on their outcome in the tradition of such great writers as Leon Uris, Gore Vidal, Ken Follet, and Herman Wouk.

When he's not writing, Winter is a successful dental surgeon and teacher, scientific advisor to StemSave, a company dedicated to harvesting stem cells from teeth, a certified forensic dentist and a sought after national and international lecturer on implant and laser surgery and 3D imaging technology.
