

KENT, ENGLAND, September 19, 2013 /**24-7PressRelease**/ -- Electrical Counter is pleased to supply the [Hartland Colours](#)

[range of electrical switches and sockets](#)

, which bring another completely new tone to the world of electrical fittings within the home, office or factory. The Hartland Colour CFX range are range of highly coloured generally red switches and sockets which bring a great sense of colour when installed into the modern electrical power supply circuit. The brightness of the colour red will probably mean that they are loved or hated by the public but there will be a very strong niche of users who will love the style and appearance of these electrical fittings. Make no mistake though in the right setting they look simply stunning.

Electrical Counter is proud to supply the [Harland Colours CFX decorative range](#) , which not only impress with their colour but also with the design of the fitment itself. The cover is very thin and the sleekness of its appearance is enhanced by the general trend towards a totally concealed fixing so that the only protrusion is the switch itself which is seen immediately because it is finished in white and virtually shines out when compared to the bright red of its surroundings. The concealed fixing is a trademark throughout the range and is probably the reason why the appearance is so striking as there is nothing to intrude on the surface except the white rocker or push switch. On off switches are of a rocker design whilst all dimmer switches are of a push on and off and twist for dimming design. The range is ideally fitted to the modern or even the Art Deco designs within the building and they do provide a totally different appearance. Electrical Counter has noted that there are many applications, which would be enhanced by the boldness of this design.

Electrical Counter are pleased to see that the range is ideally fitted to many retail of business outlets where the bright colour will enhance the bright modern designs that are so prevalent on the High Street and in the local Mall. The bright white walls and modern designs are a perfect background to present the latest fashions in clothes and commodities.

Electrical Counter supply the full range of the Hartland Colours CFX range and this will included the full socket ranges with single and double plug outlets both switched and un-switched and also a full range of data outlets that will grace any modern office block. The Hartland Colour CFX range of electrical [switches and sockets](#) will tend to fit various niche markets but there is a vast range of places where the range has the ability to change the appearance dramatically and bring a totally refreshing appearance to a room or building. Electrical Counter is pleased to be able to promote this modern range and is continually surprised by the ingenuity of the modern designer who finds ever more exciting venues to install ranges like the Hartland Colour CFX range and completely change the outlook of the installed area.

The Electrical Counter supply a wide range of electrical wholesale products in the UK including
