

BEIRUT, LEBANON, September 20, 2013 /**24-7PressRelease**/ -- The Beirut Evangelical School for Girls and Boys (BESGB) recently signed with White Mountain Technologies to put into operation Skoolee, the school management and student information system for K-12 academic institutions. The comprehensiveness of the software and multi-user feature of Skoolee were most appealing to the Beirut Evangelical School for Girls and Boys.

BESGB and White Mountain held a series of fit-gap analysis sessions to identify the BESGB's functional, technical, and data needs. Before Skoolee, each department at the school was using its own software. For BESGB, Skoolee provides a unified, all-inclusive information management system.

BESGB is expecting to put into operation all of the features of Skoolee to streamline the school's workflow and communication. "We are excited to start implementing Skoolee, as we are sure it will simplify many academic and administrative issues at the school," Mr. Samer Al Jamal, the school's principal stated. The team is also working to accommodate both the national and American academic systems at the same time.

"We are glad to announce that the Evangelical School for Girls and Boys is now using Skoolee and is added to our growing list of partners. We are looking forward to working closely with BESGB's team and to put Skoolee's functionalities at their fingertips," said Faisal Abdul Samad, Sales Manager at White Mountain Technologies.

White Mountain presented Beirut Evangelical School for Girls and Boys with a comprehensive implementation plan. The project will roll out in a series of stages: Setting up the school structure, admissions, enrollment, and registration; establishing the generation of report cards, grade books, online exams, and time tables; and creating the network for the library, medical, transportation, and inter-user communication. At BESGB, the school teachers, administration, students, and students' guardians will use Skoolee.
