

ER Troubleshooting Launches New, Upgraded Web Site

Written by Australian Business

DALLAS, TX, September 21, 2013 **/24-7PressRelease/** -- ER Troubleshooting has launched a new, "clean look" web site.

Designed to make it easier for users to find the information they need, the new site also includes more in depth information on not only ER Troubleshooting's traditional repair, maintenance, safety testing, and calibration services; it also includes more information from ER Troubleshooting's partners - DJO Global, Dyantronics, Mettler Electronics, and Pivotal Health Solutions. Additionally, the web site now includes a page dedicated solely to ER Troubleshooting's inventory of reconditioned rehabilitation equipment.

"We created the new web site to make it easier for our customers," said Steve Khairzada, CEO ER Troubleshooting. "We wanted them to know more about us, what we do, and what we sell. And we wanted to help them find information faster. We know that chiropractors and physical therapists don't have time to waste digging around in a web site."

The web site also includes resources for chiropractors and health care professionals. More information on ER Troubleshooting and the new web site is available at:
<http://www.ertroubleshooting.com>.

About ER Troubleshooting

Founded in 2005, ER Troubleshooting sells and services rehabilitation equipment from leading manufacturers including DJO Global, Dynatronics, Mettler Electronics, and Pivotal Health Solutions. We also offer a large selection of used equipment that has been reconditioned to meet the manufacturers' and our own stringent quality standards. Our technicians are manufacturer certified. For more information, contact us at 214-504-0022.
