

The Positives of Rubber Play Surfaces

Written by Australian Business

THORNHILL LEES, ENGLAND, September 24, 2013 /24-7PressRelease/ -- **Rubber play surfaces** are the go to option for child safety in the UK. They require little maintenance and maintain their thickness, keeping a high performance level when compared to their two main competitors; sand and bark. You won't find any nasties lurking beneath rubber play surfaces either, enabling children to play in comfortably and safety and giving adults peace of mind.

They're accessible, being wheelchair and pushchair friendly and the rubber surfaces are porous and non slip meaning play in all weather is possible. A rubber play surface is also an excellent way of reducing noise from toys and games that may have been previously causing disruption on a concrete surface.

[Rubber playground mats](#) are extremely durable, giving you a cost effective option to cover concrete or tarmac surfaces to keep kids safe while they play. If a section of the [rubber play surface](#) does become damaged it can be replaced quickly, easily and without closing down a play area for an extended period of time. In addition **rubber playground mats** can easily be cut to shape to fit in the more awkward areas such as small yards or patios for those looking to make a safe place to play at home.

Rubber playground mats are available in all shapes and sizes but are generally determined on the equipment being used and the size of the area that is available to cover. To get the best quote please measure up before you contact us to ensure the best advice can be given.

If you'd like to find out more about the selection of [rubber play mats](#) and surfaces available to you, or to ask advice on the best option for a play area for your business or home please visit www.simplyrugs.co.uk call our helpful team on 01924 43834.
