

ORLANDO, FL, September 24, 2013 /**24-7PressRelease**/ -- A thorough eye exam tells experienced ophthalmologists more than just the state and health of your eyes. Some diseases, such as diabetes, can be detected by symptoms that are revealed in an eye exam. Diabetic retinopathy, for instance, can damage the blood vessels in your eyes. However, it can be detected early by a trained ophthalmologist through an in-depth eye exam.

The [eye doctors at Orlando](#) Eye Institute are full-fledged MDs who have the expertise to diagnose a wide range of eye diseases. They are highly trained surgeons who successfully perform [cataract surgery in Orlando](#) , as well as a host of other procedures to help keep your eyes healthy and protect your vision.

"We always begin by sitting down with our patients one-on-one and take the time to obtain their complete medical history," said Keshini Parbhu, MD. "Then, we use some of the most advanced eye care technology to run a variety of tests. Based on the results of these tests and the patient's history, we proceed to map out an individualized eye care program for our patient. We are not a cookie cutter eye care practice."

If you need [eye surgery in Orlando](#) , consult with the experienced medical professionals at the Orlando Eye Institute. Their [Orlando ophthalmologists](#) use state-of-the-art eye care diagnostics to craft an eye care regimen that is tailored to each patient's individual needs. They offer comprehensive eye care for your entire family.
