

ATLANTA, GA, September 27, 2013 /24-7PressRelease/ -- Despite their name, woodpeckers can cause considerable damage not just to wooden surfaces, but to other synthetic finishes as well. Urban Wildlife, well known

[Atlanta animal removal](#)

experts, give a number of reasons why woodpeckers drill on wood and other surfaces.

They basically drill for food. Tiny insects are sometimes trapped inside the wood and woodpeckers are especially skilled at detecting and reaching them. Drumming on surfaces is also their way of attracting a mate or identifying and defending their territories. Woodpeckers also drill on surfaces to create roosting or nesting sites for their young.

Whatever their reason, their drilling is not just an annoyance, but can lead to extensive damage to your property in the long run that can be quite costly to repair. Because of this, the [Atlanta wildlife control](#)

experts from Urban Wildlife suggest dealing with woodpeckers as soon as their presence is detected.

"You can depend on us to take care of any wildlife problem you have in the greater Atlanta area," says Richard Wallas, President of Urban Wildlife.
