FORT WAYNE, IN, September 28, 2013 **/24-7PressRelease/** -- Research studies have shown that one of the first things most people notice about another person is a smile. At Harrison Dental Group, the office of Fort Wayne, IN dentist Dr. Keith Harrison, patients can achieve healthier and more beautiful smiles thanks to the cosmetic dentistry services Dr. Harrison provides.

Cosmetic dentistry is an ever-growing discipline in the field of dentistry. It focuses on using technology and dental skills to improve the appearance of a patient's smile. From brighter teeth to fewer chips to replacing missing teeth, Dr. Harrison uses cosmetic dentistry services at his Fort Wayne, IN dentist office to help patients see results they never thought possible.

"A patient's smile is a reflection he or she sends out to the world," Dr. Harrison, a Fort Wayne, IN cosmetic dentist, says. "Many of my patients know they are not completely happy with their smile, but they're unsure of where to begin when it comes to changing it."

Dr. Harrison often recommends his patients start with a cosmetic dentistry consultation. This serves as a conversation about what aspects of their smiles patients feel unsure or self-conscious about. This can mean a stained tooth for one patient or several missing teeth for another.

Dr. Harrison offers a comprehensive list of cosmetic dentistry services at his Fort Wayne, IN dentist office. This includes teeth whitening and bleaching. Dr. Harrison uses Zoom! teeth whitening, which uses a chairside lamp to speed the whitening process. Zoom! whitening has been shown to remove not only superficial or food-related stains, but also aging- and medication-related staining.

For those whose front teeth are misshapen, chipped, cracked or stained, Dr. Harrison offers veneers. These shell-like coverings are glued over the front teeth to create a white, even smile.

If the dental concern is one tooth or a few teeth, Dr. Harrison can use techniques such as bonding, contouring and reshaping. These approaches can accomplish everything from filling in tooth gaps to correcting overlapping teeth. If teeth are misaligned, Dr. Harrison also offers Invisalign services at his Fort Wayne, IN dentist's office. Invisalign is an alternative to wearing braces. Patients wear a series of invisible aligners that are swapped out every two weeks until a patient achieves his or her desired results.

"Having so many procedures and tools at my fingertips helps me provide exactly what my patients need to experience smile improvements," says Dr. Harrison, a Fort Wayne cosmetic dentist. "Cosmetic dentistry services do so much more than change a smile's appearance. They can also boost a person's self-esteem."
