

MCLEAN, VA, September 28, 2013 /**24-7PressRelease**/ -- In September 1983 ZyLAB was incorporated in Chicago, Illinois to realize the founder's vision of a much needed market for an easy to use and powerful full-text search program on the new personal computer platform. The history of ZyLAB started with the launch of ZYINDEX.

This revolutionary product became an instant success and resulted in almost a million licensed users among (corporate) lawyers, law enforcement officials, and government agencies. Even today these professionals still form the core of the ZYLAB clientele.

Johannes Scholtes, ZyLAB's Chief Strategy Officer: "As Bill Gates said: 'every software company should reinvent itself every three years to stay competitive.' That is why ZyLAB also successfully reinvented itself several times, responding to our customers' requirements and in very close cooperation with both our users and other experts from the field."

ZyLAB's support for complex business processes and compliance extended beyond software. Drawing on our extensive global experience we provide professional services, best practice recommendations, turnkey solutions to resolve many common business risk issues such as fraud, bribery and the management of personally identifiable information.

Today ZyLAB's technology handles text in more than 450 languages and over 1000 file formats, and includes native search for audio and image based information. ZyLAB's research and development will continue to innovate to address the risks of Big Data in this world of ongoing information explosions.

Please visit our website for a brief overview of ZyLAB's history.

About ZyLAB ZyLAB's industry-leading, modular eDiscovery and enterprise information risk management solutions enable organizations to manage exponential amounts of enterprise data in any format and language, to mitigate risk, reduce costs, investigate matters and elicit business productivity and intelligence.

The ZyLAB eDiscovery system is directly aligned with the Electronic Discovery Reference Model (EDRM) and the company's products and services are used on an enterprise level by corporations, government agencies, courts, and law firms, as well as on specific projects for
