

CLIFTON, NJ, October 02, 2013 **/24-7PressRelease/** -- ProperHost, an eCommerce hosting specialist, announced on Monday the Magento Mini hosting package, a new addition to their hosting service offerings.

"Priced at only \$9.95/mo, this new entry-level plan is perfect for anyone on a constrained budget or small startup sites. We know that starting an online business is hard, and not everyone can afford to spend a premium on hosting fees from day one. We want to accommodate these users by offering an affordable, yet high-performance hosting solution," says Sindre Paulsrud Moe, CEO and Founder at ProperHost.

The Magento Mini plan includes 5 GB of SSD disk space and 50 GB of bandwidth, and is optimized for Magento, but other web applications will equally benefit from these improvements according to ProperHost.

Following the new Mini hosting package, ProperHost has also implemented significant upgrades to their existing hosting packages. The Magento Basic disk space quota has been increased from 5 GB to 15 GB of SSD storage, and now includes 150 GB of monthly bandwidth (up from 50 GB). The Magento Professional package now gets 25 GB SSD disk space, up from 15 GB, and also includes a dedicated IP address and a GeoTrust SSL certificate.
