

GRAPEVINE, TX, October 03, 2013 /**24-7PressRelease**/ -- The medical name for bald spots is alopecia, a condition that afflicts between one and two of every one thousand men and women in the United States.

"The causes of alopecia aren't fully understood but many believe it is caused by the auto immune system attacking hair follicles and stopping hair growth, and that it is made worse by harmful chemicals such as relaxers," says [Adachi DaDa](#), a licensed cosmetologist and [International Dermal Institute](#) skin care therapist with more than 3200 hours of training.

"When we switch a person to [all-natural hair care products](#), we see great improvement in hair growth and less alopecia, possibly because the person's immune system calms down and natural growth resumes," said DaDa, owner of a new [Grapevine TX beauty salon](#).

Prior to opening her own salon at [Salon and Spa Galleria in Grapevine](#), Adachi DaDa has worked in the natural hair care industry for quite some time offering chemical free, natural hair styling services. "I always had in the back of my mind to open a salon of my own because of what I learned from watching my entrepreneur father operate his construction business," said DaDa.

"My choice to do natural styling came out of a lifestyle change I made to go all natural when my children were born," said DaDa who is vegetarian and embraces a natural, homeopathic, organic lifestyle. "Many people are surprised when they find out that there are all-natural alternatives to chemical hair relaxers, styling and other hair care products that are healthier and work so much better," said DaDa.

In addition to offering [hair repair, restore, regrow services](#) to clients with alopecia, Adachi offers color services, hair extensions, loc up dos, and original loc creations.
