

TRENTON, NJ, October 03, 2013 **/24-7PressRelease/** -- Rapidsoft Systems Inc. (<http://www.rapidsoftsystems.com>) today introduced new training courses related to IT security and IP networking for IT professionals. These courses are designed for specific competencies critical to meeting demand for IT security skills that align with evolving roles, technologies and business requirements. There is a significant need to upgrade these skills if companies are to avoid data breaches and safeguard their data centers and networks from determined hackers.

All Rapidsoft Systems' training programs and courses are designed and delivered under the expert guidance of Brijesh Kumar, Ph.D., an internationally recognized network security researcher and a former professor of Cyber Security at a major research university. Dr. Kumar formerly led research in IP networking, mobile communications and IT security at major technology companies such as Motorola and Panasonic Corporations and is a member of technical review panels for many professional IEEE and ACM conferences/ journals.

The combination of new security threats, regulatory compliance mandates, and the need to protect customer and organizational data requires continuous vigilance and trained manpower. However, most IT departments are ill equipped due to the lack of proper training in the security technologies. The increasing complexity of networks, data centers and new emerging technologies make it harder for busy professionals to keep up-to-date. With the emergence of mobility, social networking, voice, video, virtualization and cloud computing, it is becoming very difficult to safeguard critical infrastructure against very determined adversaries. The only way to manage risks is to be better prepared.

Commenting on the launch, Dr. Brijesh Kumar, Head of Technology, and Director of Training Programs, said, "As the leader in security technology consulting, Rapidsoft Systems is dedicated to developing training programs that help IT professionals stay ahead of ever increasing threats and vulnerabilities. All our training programs are delivered by the subject matter experts. At Rapidsoft Systems, we continue to evolve skills development for security professionals to match changing business requirements and new roles."
