

AUBURN, NH, October 04, 2013 /**24-7PressRelease**/ -- The BeeSafe Organic Lawn Care Network will allow landscape professionals the opportunity to expand their business by offering sustainable solutions to the environmental damage and health safety issues caused by use of harmful synthetic chemical fertilizers and toxic pesticides. NTI also offers systems to help reduce pollution and promote conservation of resources.

BeeSafe Applicators get all of the advantages of brand name awareness, intensive training, proprietary products, proven application systems and continued technical support, while still maintaining their own, independently operated business. The response to the BeeSafe Applicator program has been overwhelming. NTI is receiving inquiries from lawn and landscape companies all across the USA.

The BeeSafe organic system includes: Organic lawn management, Organic tree and ornamental programs, and Natural pest and weed control options. Certified BeeSafe Applicators will receive access to NTI's unique product technology and patent-pending application system that introduces beneficial microbes into the soil web. The goal is to eliminate the need for synthetic chemicals and pesticides on lawns and plants. They will also learn about recent laws and regulations on pesticides and the use of natural weed and pest control products as safer alternatives. This, along with marketing tools and on-going application support, will help a landscape professional to stand out as an organic specialist and grow their business.

BeeSafe Organic Lawn Care offers customers a natural, organic alternative to managing landscapes and the chance to share in the mission of creating a safer environment. This unique, eco-friendly system approach provides BeeSafe Applicators a way to differentiate their services and capture market share of a fast growing demand for using organic lawn care instead of using toxic chemicals. BeeSafe products and systems have gotten rave reviews and are being used by high profile customers, such as universities, theme parks and sport stadiums.

BeeSafe will be exhibiting at the upcoming GIE EXPO in Louisville, KY on Oct 24-25. Please visit them at their Booth # 474 and receive a free BeeSafe $\frac{1}{2}$ mobile lawn measuring APP.

Headquartered in New Hampshire, Natural Technologies Inc. strives to be a leader in research on natural and organic products. Lou LaMarca, President and CEO of NTI states: "We have a mission to provide high performance alternatives that will eliminate the use of dangerous pesticides and synthetic chemical fertilizers. We use innovative technology to make progress towards saving the environment and creating a healthier world for people and their children."
