

LANSING, MI, October 04, 2013 **/24-7PressRelease/** -- Certified Mold Inspectors Phillip and Divine Fry of EnviroFry announce that they are now providing professional and certified mold inspection, testing, and remediation services in metro Detroit, metro Grand Rapids, metro Lansing, metro Flint, and every other area in the state of Michigan.

For detailed information on Michigan mold and environmental services provided by EnviroFry, based in Montrose, Michigan, please visit company websites:

<http://www.detroitmoldinspector.com>,

<http://www.grandrapidsmoldinspector.com>, <http://www.lansingmoldinspection.com>, and

<http://www.flintmoldinspection.com>.

The Frys suggest that mold inspection and testing is very advisable in any of these four situations: (1) when purchasing a home, condo, or commercial building; (2) if any resident or workplace employee is experiencing any of the top 100 mold health symptoms and mold illnesses listed at <http://www.moldinspector.com>; (3) the home or building has current or previous roof leaks, plumbing leaks, or flooding; and (4) mold growth is visible anywhere in the building, including inside the attic, basement, crawl space, and heating/cooling ducts.

EnviroFry mold inspection, testing, and remediation fees are reasonable and affordable. For mold victims on a limited budget, the company provides do-it-yourself training, equipment and supplies to keep mold removal costs within budget.

For example, property owners and managers can use high output ozone gas to kill toxic mold as both the first and mold remediation steps. Low-cost, high output ozone blasters are available at <http://www.ozonegeneratorkillsmold.com>.

Read mold consultant Fry's recommended ten steps to remove mold at http://www.moldinspector.com/mold_removal.htm.

In addition to the use of ozone gas, homeowners and commercial building owners should also use either boric acid powder or the EPA-registered fungicide Tim-Bor in their mold remediation process. Information on boric acid powder is available at <http://www.moldmart.net>. Information on Tim-Bor is posted at <http://www.timborprofessional.com>.

Certified Mold Inspectors Announce Michigan-Wide Mold Inspection, Testing, and Removal Services
