

Destination Green Composite Launches His New Product Called Teak Composite

Written by Australian Business

YOGYAKARTA, INDONESIA, October 05, 2013 /**24-7PressRelease**/ -- Wood-Plastic Composite (WPC) is manufactured from a mixture of natural wood and plastic with some additional ingredients using special machines called extruder. The final product created from the process is perfectly similar like wood in appearance without disadvantage. It has been widely used in more and more fields and gradually replaced the usage of natural wood. Wood plastic composite is especially favored in the fields like landscape architecture, real estate and city construction.

Destination Green teak composite decking is available that are not only lifelong and aesthetically charming, but also make efficient use of recycled materials. Teak dust as the main ingredients is collected from local saw mill in Indonesia. The teak composite decking is made almost entirely of recycled materials making it environmentally friendly. It utilizes up to 90% post-consumer recycled materials, including saw dust and recycled plastics.

Many property owners are turning to wood plastic composite because of environmentally responsible without sacrifice the functionality and durability. Teak composite especially will stand the test of time, and perhaps most importantly, look great for years to come.

Teak Composite Decking is available in two colors, grey and natural brown and two sides usable, featuring a matte brush finish for none slip resistance. Each board is protected with UV inhibitors to make sure long-term color. It will look great year after year. Since there is no need to spend hours repairing or staining, the enjoyment of a Destination Green teak composite is truly timeless.

Using teak composite is a good alternative beyond traditional options. Teak composite Destination Green does not need staining or painting - appealing with today's busy lifestyles. It's perfect to decorate your balcony, porch, patio or garden with this innovative eco-friendly wood plastic composite decking system.

Roma Indonesia is an Indonesian based company that produces wood plastic composite products from teak dust with Destination Green as his premium brand. Recently the company announces a new product called teak composite decking for local as well global market.
