

BERLIN, GERMANY, October 05, 2013 /**24-7PressRelease**/ -- MediPurpose(tm), a master distributor and manufacturer of medical products, today announced an addition to its expanding portfolio of lancet patents.

The medical product company was recently granted patent 6009016940.8 for its babyLance(tm) safety heelstick from the German Patent and Trade Mark Office (DPMA) in Berlin, Germany.

The German patent grant validates babyLance's recent European Patent Office (EPO) patent application approval. Although an EPO patent provides intellectual property protection in the EPO's 38 member states, country-specific validation extends the patent's protective effect and enforceability.

The babyLance EPO patent 2303123 is awaiting validation in other EPO member states.

About babyLance Safety Heelsticks

babyLance safety heelsticks are single-use safety needlestick devices for the collection of blood from infants.

After investing more than a year in its redesign, MediPurpose launched the all-new babyLance in August 2012.

babyLance is available in two models, each with a specific blade penetration:

* babyLance BLP (preemie): 0.85 mm depth* babyLance BLN (newborn): 1.0 mm depth

Specifically designed to meet end-user expectations for the ideal heelstick, the new babyLance provides enhanced stability, comfort and ease of use.

German Medical Device Patent Validated for babyLance Safety Heelstick
