

PEMBROKE PINES, FL, October 06, 2013 **/24-7PressRelease/** -- Patients who have smiles that are less than they had desired, no longer need to fret. With the help of Dr. Osmani Diaz at Diaz Restorative Dentistry & Orthotics, patients in Pembroke Pines can utilize Invisalign for straighter teeth without the bulk of traditional braces.

With Invisalign in Pembroke Pines, patients can straighten their teeth without anyone knowing they are undergoing treatment for a Hollywood smile. Many adults think a celebrity smile is out of their reach, but Dr. Diaz is here to show them it is possible with Invisalign. When visiting Dr. Osmani Diaz, Pembroke Pines dentist, an appropriate treatment plan will be created to help achieve a straighter smile.

"Actresses and actors are known around Hollywood for having perfect, straight smiles. What many people don't know is that they didn't always have those beautiful, straight, white teeth," stated Dr. Osmani Diaz, a cosmetic dentist in Pembroke Pines. "With Invisalign's clear aligners, my patients can straighten their teeth without anyone noticing they are undergoing treatment."

The process of straightening teeth in Pembroke Pines with Invisalign begins with a set of impressions and photographs of a patient's teeth, which are used to create a three-dimensional computer image of how the teeth will eventually move after each session. Through the impressions and images, a series of custom-made aligners are designed to accomplish the gradual adjustment.

Invisalign utilizes 3-D computer imaging technology to design the complete treatment plan. From the initial teeth positioning to the desired final positioning, this 3-D imaging allows patients to preview the final positioning of their teeth before treatment is started. Each aligner is worn for approximately two weeks and are custom-made based on the imaging information. Typically, patients will visit with Dr. Osmani, dentist in Pembroke Pines, once every six weeks to observe the progress of his or her smile.

Each aligner must be worn in the specific order given by Dr. Diaz for approximately two weeks. During this time, the patient's teeth will move in small increments of about .25 millimeters to .33 millimeters. Although the aligners are conveniently removable, they must be worn for at least 22 hours a day in order to successfully reposition the teeth.

Not every situation can be treated with Invisalign. By contacting Dr. Osmani Diaz, a dentist in Pembroke Pines, FL, for more information on Invisalign and to see if it is an appropriate solution

for a straighter smile, patients can take the next step in achieving a smile they can show off. Dr. Osmani Diaz will provide a proper evaluation of each patient's teeth to see if he or she can be helped with Invisalign in Pembroke Pines.
