

TAMPA, FL, October 07, 2013 /**24-7PressRelease**/ -- Once again, Silent Partner Technologies (SPT) leads the way in RFID based Asset Management solutions with its latest addition—IntelliVan. As an extension of its "real-time" visibility of assets within a vehicle (previously PC Based), the driver(s) within the Vehicle(s) can now see the status of their assets within their vehicle on a "Phone"—essentially the "Phone" is the Central Processing Unit/the Microcontroller. As such we've "drastically" reduced the cost while simplifying and improving the solution and thus making it affordable to the masses.

As updates or changes occur across hundreds or thousands of Vehicles with respect to their Asset Status, IntelliVan is updating the SPT cloud application at pre-set intervals, and thus allowing various managers, and/or other users the ability to see these updates as they occur in "real-time". Furthermore, and most significantly is that IntelliVan supports both "Active and Passive" RFID technologies!

Whether we're tracking valuable assets for a construction company, or an EMS Ambulance, or a rocking roll bands tour equipment, our clients will never have to worry or guess whether or not they have their equipment. IntelliVan will give them the "green light" telling them all is well, or the "red light" telling them what is missing, or a "cautionary yellow" telling them what equipment belongs to someone else.

"There's a huge need for a solution such as this says Ted Kostis, President of SPT, and we have finally figured out a way to make it affordable"!

Above and beyond simply tracking the assets, there are significant security functions available as well. Such options include but are not limited to unexpected movement, temperature sensors, activation of a panic button, tampering with or removal of a security seal and much more.

Based on the success of SPT's Asset Management software solutions, IntelliVan incorporates and leverages all the features of the parent program. Data collection is real time or batch, as required, and reports can be completely customized. The information collected can be viewed on a dashboard, maps, or with text if that is preferred.

Silent Partner Technologies , a developer and integrator of RFID solutions, is a Tampa Bay, FL based company. We develop, manufacture and implement leading edge RFID and barcode tracking solutions. Silent Partner Technologies has a wide range of experience providing the best RFID and barcode technologies for a variety of industry needs. This experience includes but not limited to providing passive RFID technology for tracking military training simulation hardware, as well as active RFID technology for the tracking of cargo shipments from the Pacific coast to the Atlantic coast of Columbia, South America or the tracking and management of expensive RFID art assets across many retail locations real-time. Similarly, we have assisted with providing the right solution to a 3PL provider to manage their inventory.
