

MONTREAL, CANADA, October 12, 2013 /**24-7PressRelease**/ -- VuWall Technology Inc., a specialist in video wall control software, today announced the release of VuWall2 Mobile: an Android application designed to manage and control video walls powered by Matrox Mura MPX Series video wall controller boards.

The VuWall2 Mobile app consists of a design interface and a control interface. The design interface allows users to open windows, arrange groups of windows and save layouts. The control interface elegantly lays out a set of buttons to launch layouts, with a new control button being generated automatically each time a layout is saved. Multiple users can control the Matrox Mura-powered video wall simultaneously.

"The video wall market has seen tremendous growth these last few years, yet still we find that most video walls deployed today don't take advantage of the flexibility offered by products like the Matrox Mura MPX boards. We think that offering a free, simple-to-use app like VuWall2 Mobile will help users and content creators discover new ways of building eye-catching, interactive video walls," said Paul Vander Plaetse, president of VuWall Technology.

Helgi Sigurdsson, product manager at Matrox, explained, "Our mission is to democratize the use of video walls by offering powerful, flexible and affordable technology. VuWall, our long-time partner, is mirroring this direction by developing versatile, intuitive software solutions. We're confident that the combination of the VuWall2 Mobile app with Matrox Mura MPX Series hardware will streamline the way people use video walls."

VuWall2 Mobile is available on the Google Play Store as a free download.

About VuWall Technology VuWall Technology develops collaborative visualization software and sells video wall controllers through a network of audio visual integrators and distributors around the world. In line with the increasing availability of commercial off-the-shelf video wall hardware on the market, VuWall Technology develops software products that make it easy for system integrators to deploy video wall projects even in the most demanding control-room environments.
