

ORLANDO, FL, October 15, 2013 /24-7PressRelease/ -- As one of the most trusted orthodontist's in the Orlando area,

[Dr](#)

[. Lach](#)

knows the importance of using the latest technological advances in treating patients who desire straight teeth and a more beautiful smile. Adults and mothers of pre-teen and teenage children will be glad to know that no longer is it necessary to suffer through those "gaggy" impressions! Their new Lythos digital orthodontic scanner now makes it possible to scan patients' mouths, eliminating the need for drippy, gooey impression material in most cases.

Our goal is to deliver the results our patients expect in the most comfortable way possible, and the digital orthodontic scanner helps us achieve that goal. The process of having your teeth straightened through the Invisalign system or braces is one that can be pleasant throughout - and now, many patients can avoid having to go through impressions and that "full-mouth" experience that can even make some feel nauseous.

What is a digital orthodontic scanner? Simply put, it's nothing more than a wand with a camera which passes over your teeth and captures an image. Once the images are captured, an impression is reproduced digitally. Quick, easy, painless, and no more messy, gaggy impressions!

How does the digital orthodontic scanner work?- The laser wand scans your teeth and soft tissue structures in just minutes, the result being a perfect impression of your teeth in 3-D! On average, it takes about seven minutes for the data to be captured through a single high resolution scan.- Impressions taken with the digital orthodontic scanner are perfect every time, so there are no worries as are often found with traditional impressions. These scans last a lifetime, so there is never again a need for tray and putty impressions, or having to take multiple impressions due to rejection by the lab or even breakage of the original.- Because scans go directly to the lab which creates the appliance, patients enjoy quicker service and aligners that fit perfectly the first time, with no "do-overs."

Having your teeth straightened doesn't have to be an unpleasant process, and considering today's innovative new technologies, it's easier and more comfortable than ever before. Whether you or your child are considering traditional metal braces, Invisalign, or other options, the digital orthodontic scanner eliminates the need for those nasty, runny, gooey, gaggy impressions!

Let Dr. Lach of [Lach Orthodontic Specialists](#) and his Orlando orthodontics staff deliver your most attractive smile ever! Straight teeth not only improve your looks, they improve your
